Optimized Solution for System Drive

Control the Crane, Elevator & Continuous line system based on powerful performance

High Performance Control system

Speed/Torque control, SIN/COS encoder, PM Sensorless, Auto tuning, Endat encoder, Draw/Droop/ Process PID Control, Built-in brake control

User-friendly Interface

User-friendly keypad, Various field bus option, DriveView management

Various Option for System Application

Synchronize, SIN/COS encoder(Endat encoder), Extension I/O, EL I/O option

'We guarantee, your satisfaction will be beyond your expectation'

iV5 series realizes the high precision vector control in entire operational area and its highly precise speed control guarantees a superb control stability in the crane, continuous line and elevator system controls.

220kW UL Certification ISO 14001, ISO 9001

Features

Optimized Solution for System Drive

Control the continuous line as Metal processing/Paper & Paperboard, Crane and Elevator system based on powerful performance

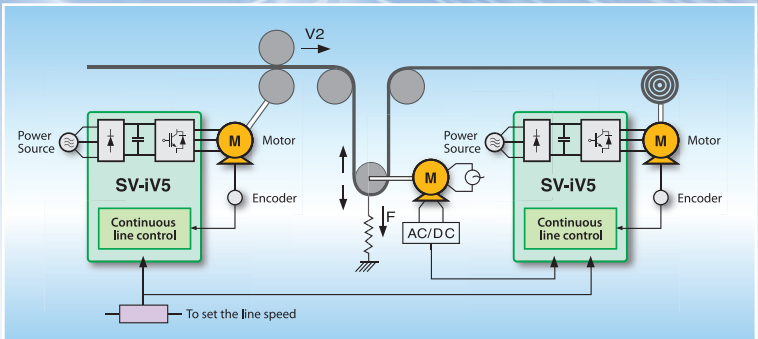

System Drive

iV5 provides the optimum system operating environment with various function and superior control performance

Continuous line

Winding/Unwinding System of Metal processing, Paper & Paperboard, Textile, Cable line

Customized function for continuous line

- Diameter operating
- Taper function
- Splicing control
- Flux/Tension control
- Inertia compensation
- Bobbin random set function
- Quick stop
- To use Dancer/Load cell
- Online set Winding/Unwinding
- Over/Under winding
- Breakage detecting function
- Core fault detecting function

Diameter operating

Tension control

Tension control

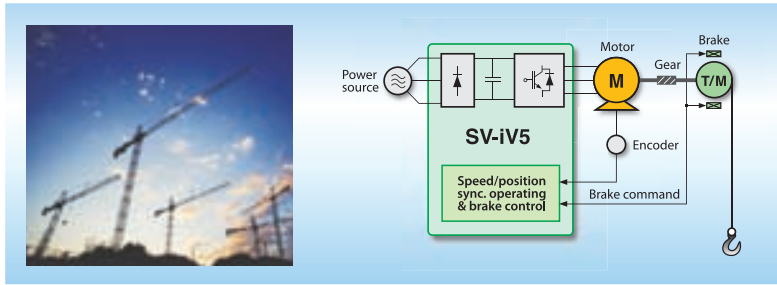

Taper function

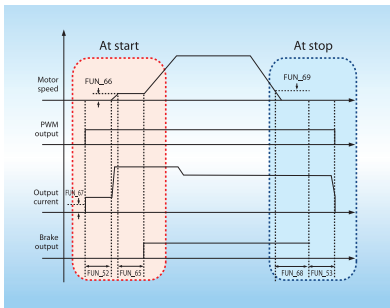

iv5 guarantees system safety and reliability with enhanced protection function and various option

Crane system

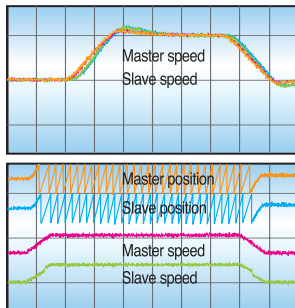

iv5 can operate crane system with load balancing, speed/position control, brake control of harbor crane, overhead crane, tower crane, parking system and automation warehouse

Brake control

Synchronized operating with speed/position

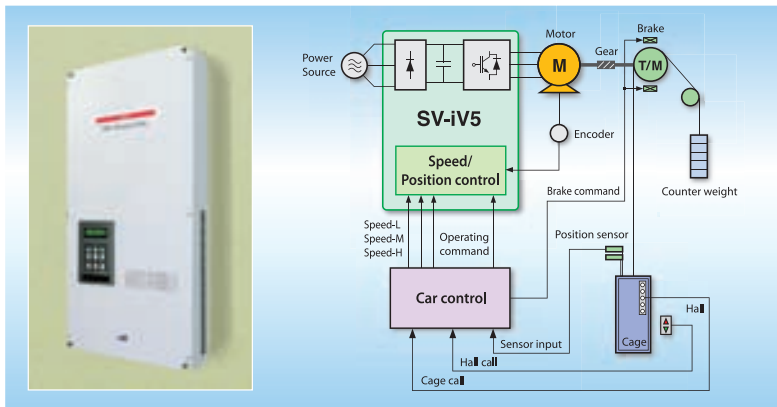

Load balancing with droop control

iv5 guarantees comfortable and stable driving with precise position control

Elevator system

iv5 guarantees stable driving and monitoring the elevator with both optimum speed pattern and position control.

Rollback Prevention : Anti-Rollback Function (without external load cell)

Time Chart for Anti-Rollback Function

Before Anti-Rollback Algorithm

After Anti-Rollback Algorithm

Precise Control

Precise speed/torque control, Accurate control with SIN/COS encoder, PM Sensorless control, Auto tuning(at standstill), Draw/Droop/Process PID Control, Brake Control

High Performance

iV5 guarantees precise speed/position control and synchronous operation in various systems.

Speed/Position Synchronized operation

- Speed/Position synchronizing operation
- Precision synchronizing operation in 5°
- Synchronizing in driving / Synchronizing in starting
- Synchronous operation with multiple motors

(with synchronized option card)

Speed synchronous operation

Position synchronous operation

Autotuning

Standstill autotuning

This unique technology of LS allows the autotuning operation to be performed even with the motor shaft directly connected to the load. Especially, this standstill type autotuning is very useful in the lift application because it does not require removal of brake coupling connected to the motor.

Rotation autotuning

This type of autotuning has been widely used for the vector control inverter. As the name implies, this requires the motor shaft to be free of the coupling for a proper operation.

Precise and safe control system

Draw/Droop/Process PID control

Draw/Droop/Process PID control is provided for precise control such as tension control, linear velocity control, temperature and pressure control and useful functions easily implemented like Load balancing.

■ Draw control

■ Process PID control

■ Droop control

Built-in brake control for vertical loading safety

Brake Control

For applications which have a risk of dropping, for instance elevator and crane system, brake control is built in

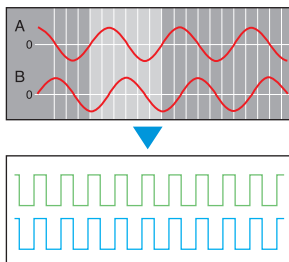

■ Draw control

Extreme precise control

SIN/COS encoder option

With SIN/COS encoder option, users can control more precisely than normal encoder

SPM, IPM motor control without any sensors

Synchronous motor sensorless control

With synchronous motor sensorless control functions including initial stimulus position estimation, it perfectly controls SPM, IPM motor without additional sensor.

- SPM, IPM motor
- Within $\pm 5^\circ$ error estimation
- Sensorless 30,000rpm driving Fast reponse within 100msec
- A variety of applications such as hydraulic pumps, high-speed compressor, turbo blower

** Please contact us for SPM, IPM motor drive

Features

User Friendly Interface

Easy to use with user-centric keypad and removable terminal blocks

A variety of communication supported such as LS485, Modbus-RTU, Device Net, Profibus-DP, CC-Link

Systematic and efficient management of system through DriveView

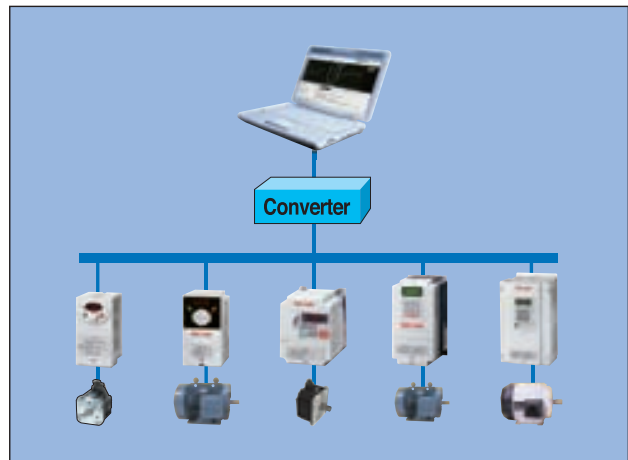

Convenience

Easy to maintain drive/motor parameter via PC

Drive View

Through DriveView program, drive system can be monitored with PC and managed to maintain drive/motor parameters.

- Window based Graphic User Interface (GUI)
- LS485, Modbus-RTU
- Max 31 drives connection
- Reporting
- Event logging
- Integrated control console
- Offline editing
- Data upload/download
- 4ch oscilloscope
- Trigger function

User friendly design

Easy-to-use keypad

By adopting a user-centered operation keypad, parameter setting becomes easier and when applying to system, a variety of required information can be monitored.

International standard removable terminal block

Wiring/maintenance become easy by international standard acquired terminal block and use also becomes easy by choosing various input/output options depending on intended use

Various fieldbus communication options

Providing a variety of fieldbus communication options such as LS485, Modbus-RTU, Device Net, Profibus-DP, CC-Link and so forth, users can monitor and operate drives connected with PLC, HMI and other controllers.

Features

Wider Applications with Various Options

Synchronous option, SIN/COS encoder option, expansion I/O, Elevator dedicated I/O and so forth

A wide range of options and applications

Variety

- Closed/Open loop continuous line control
- Load balance function
- Diameter operating /Taper function
- Splicing control /Inertia compensation
- Breakage detecting function
- Quick stop

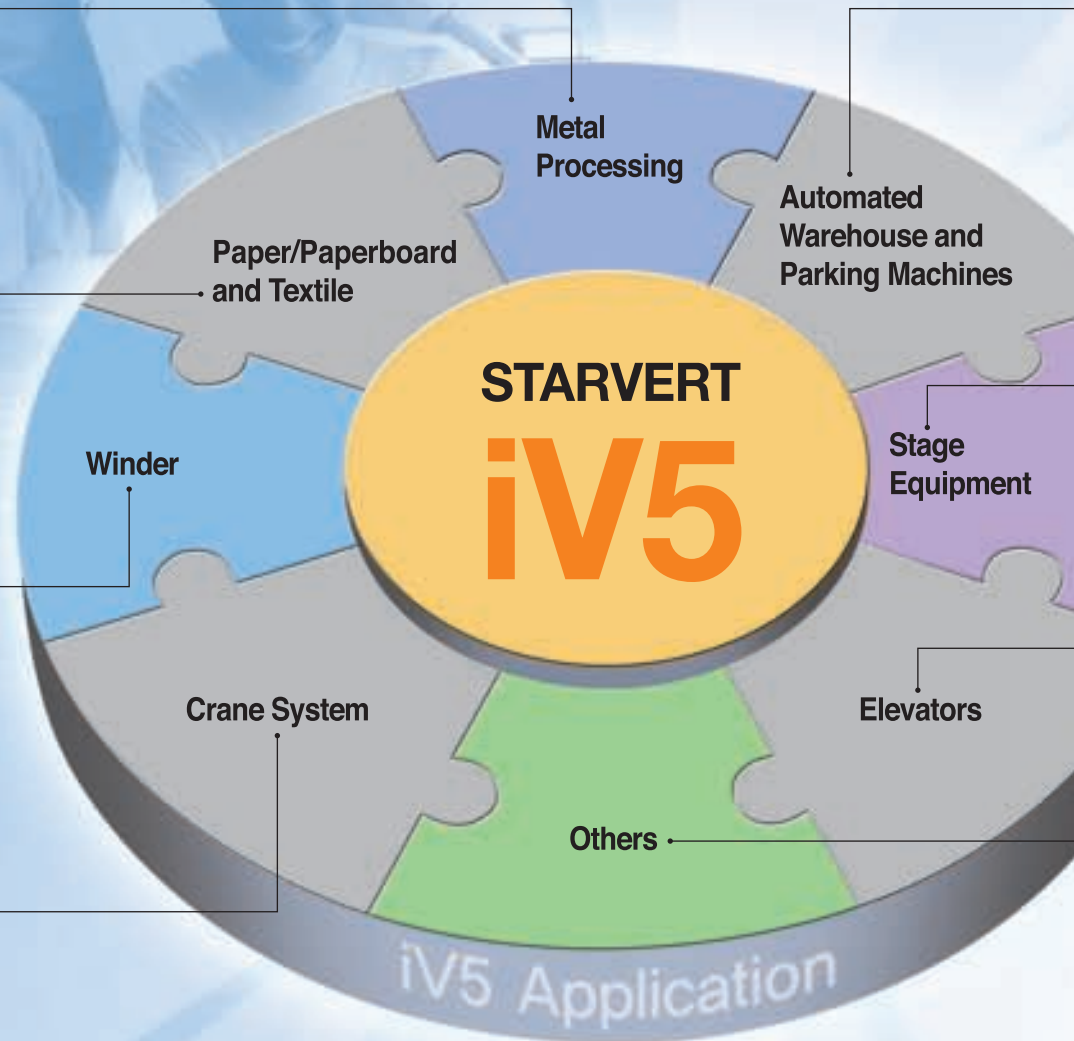

- Closed/Open loop continuous line control
- Flux/Tension control with PID function
- Diameter operating /Taper function
- Splicing control /Inertia compensation
- Breakage detecting function
- Zero velocity control
- Quick stop

- Closed/Open loop continuous line control
- Flux/Tension control with PID function
- Diameter operating /Taper function
- Splicing control /Inertia compensation
- Breakage detecting function
- Jog operation at low speed
- Quick stop

- Built-in brake control
- Speed/Position synchronous operation
- Load balance function
- Dedicated DB unit

iV5 Option

■ Synchronization option

- Speed/Position synchronizing operation
- Consuming current : 300mA
- Input frequency : 100kHz
- Open collector output
- Multiple band operation

■ CC-Link

- Max. 10Mbps speed
- Customized LS profile
- CC Link customized cable
- Built-in termination resistor
- Remote I/O : each 32 point
- Remote register : 4 words

■ Elevator I/O

- Position sensor/Safety switch input
- Car position output
- E/L position and sequence control
- MC/Brake operation signal output
- E/L exclusive connector

■ LS485/Modbus-RTU

- 1200/2400/4800/9600/19200/38400 bps speed Bus, Multidrop link system
- Max. 31 node
- Max. 1200m period (recommended 700m)

■ Device Net

- 125/250/500kbps speed
- Bus topology
- Max. 64 node
- Max. 500m (125kbps)
- Enhanced online diagnosis function

■ Profibus-DP

- Max. 12Mbps speed
- Max. 32 station
- Bus topology
- Enhanced online diagnosis function

■ Extension I/O

- Analog input : 5 channel
- Analog output : 2 channel
- Other functions are same as SIO board

■ 24V Encoder I/O

- 24V encoder
- Encoder power fault detection
- Other specifications are same as SIO

■ SIN/COS + Endat encoder option

- Selectable Endat & Sin/Cos Option
- Max. 3,600rpm speed
- Enhanced Comfortable feeling in Car
 - Compatibility with Heidenhain Encoder
 - ECN413, ECN1313, ERN487, ERN1387

- Built-in brake control
- Load balance function
- Dedicated DB unit
- Zero velocity control
- Precise control through SIN/COS encoder

- Speed/Position synchronous operation
- Load balance function
- Precise control through SIN/COS encoder
- Zero velocity control
- Smooth acceleration and deceleration

- Elevator dedicated control mode
- Geared/gearless elevator operation
- Precise control through SIN/COS encoder
- Elevator master function with on-board option
- Optimum speed pattern / no creep speed
- Battery operation during blackout
- Load cell optimum compensation

- Machine tools / press
- Cart
- Hydraulic pump, high speed compressor, tower blower and so forth

*Note1) Please contact us to control continuous lines with open loop control

*Note1) For more than 4 analog inputs, users need to additionally purchase expansion I/O.

■ Common Specifications

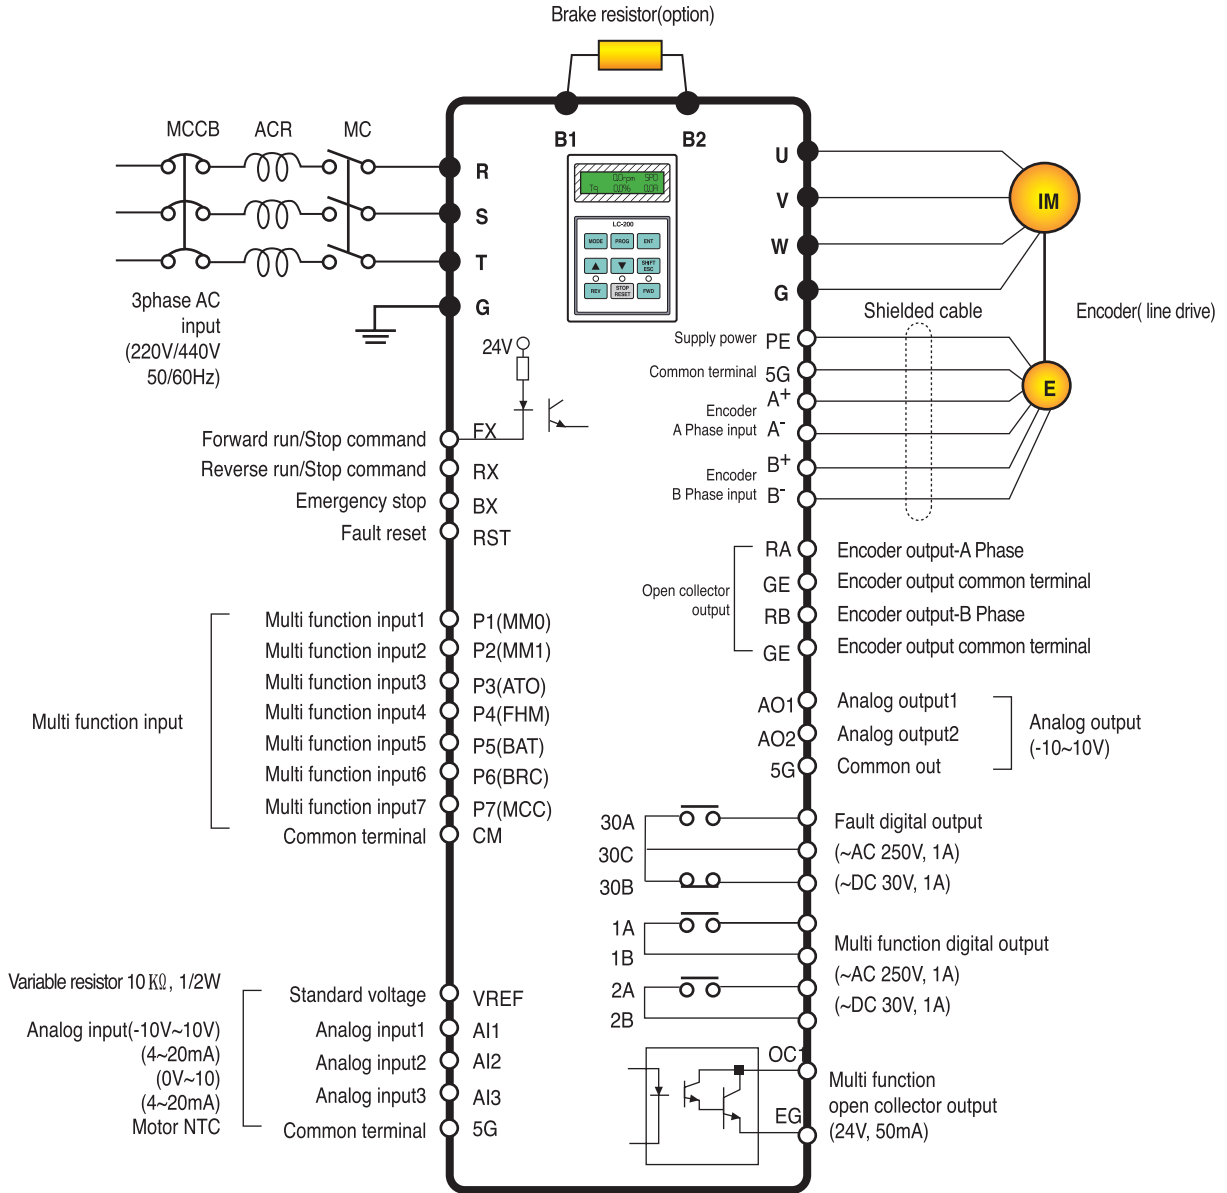

Item		Specification
Circuit type		IGBT adopted voltage type inverter
Control	Control type	Speed sensor use vector type control Open loop control: V/F control (90-220kW)
	Frequency / Speed control accuracy	Analog: $\pm 0.2\%$ of maximum command speed ($25 \pm 10^\circ\text{C}$) Digital: $\pm 0.01\%$ of maximum command speed ($0 \sim 40^\circ\text{C}$)
	Frequency / Speed resolution	Analog: $\pm 0.05\%$ of maximum command speed Digital: 0.01% of maximum command speed
	Vector	Response speed torque control 50Hz 3%
	V / F	V / F pattern torque Boost Linear, Square, User V/F Manual torque boost(0-20%), Automatic torque boost
	Speed ACC/DEC	Time setup Combination Pattern 0.00-6000.0 sec (Time unit can be set) 4 combined of Acc/Dec eleration time Linear, S-Curve
Braking	Braking type Braking torque Braking resistor	Dynamic braking using external resistor 150% An external braking resistor is required
Input	Speed setting	Digital setting Multi-step-speed setup by digital input Analog input setting of -10~10V or 4~20mA Setting by options
	Analog input	3Channels (AI1, AI2, AI3) -10 ~ 10V, 4 ~ 20mA, 10 ~ 0V, 20 ~ 4mA, motor NTC (selectable) Selectable among 9 different multi-function analog inputs
	Digital input	FX, RX, BX, RST, P1 ~ P7 Multi function input terminal (P1~P7) can be selected among 27 functions.
Output	Analog output	2-Channel (AO1, AO2) -10 ~ 10V output Selective among 31 multi-function analog output functions
	Digital output	Multi function digital output: 2channels (1A-1B, 2A-2B) Fault digital output: 1channel (30A-30C, 30B-30C)
	Open collector output	1channel (OC/EG)
Protection function		Over current, Over/Low voltage, Inverter overheat, Inverter thermal sensor open, Motor over heat, Motor thermal sensor open, Over speed, IGBT gate blocking (BX), Fuse open, Trip by unusual external signal, Encoder error, Communication error, Electronic thermal, Stall prevention (V/F), Over load(V/F), Inverter over load
Environment	Installation environment	Indoor, free of corrosive gas and direct sunlight
	Ambient temperature	-10 ~ 40C (Non frozen condition)
	Ambient humidity	Below RH90% (Dew free)
	Cooling method	Forced cooling by FAN
	Altitude / Vibration	Below 1000 meters/ above sea level $5.9\frac{\text{m}}{\text{s}^2}$ (= 0.6G)

Wiring

AC Input Type

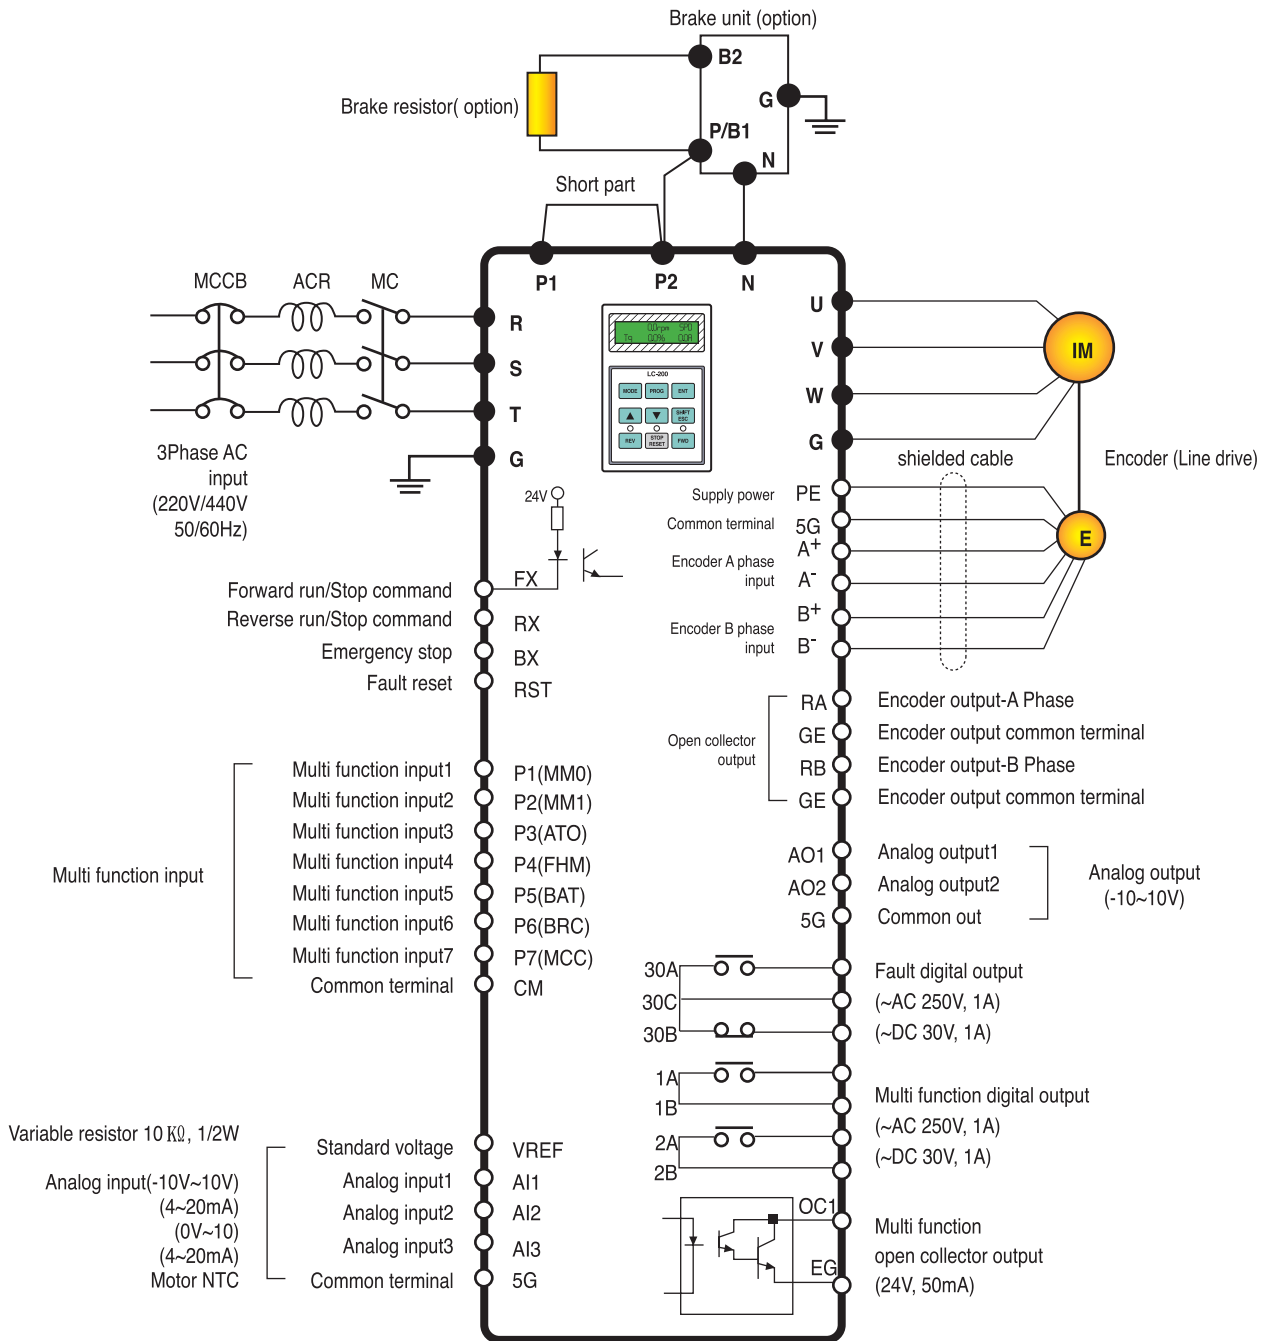

2.2 ~ 22kW (200V/400V)(MD)

Note) ● : Power terminal ○ : control terminal

AC Input Type

30 ~ 37kW (200V)
30 ~ 375kW (400V)

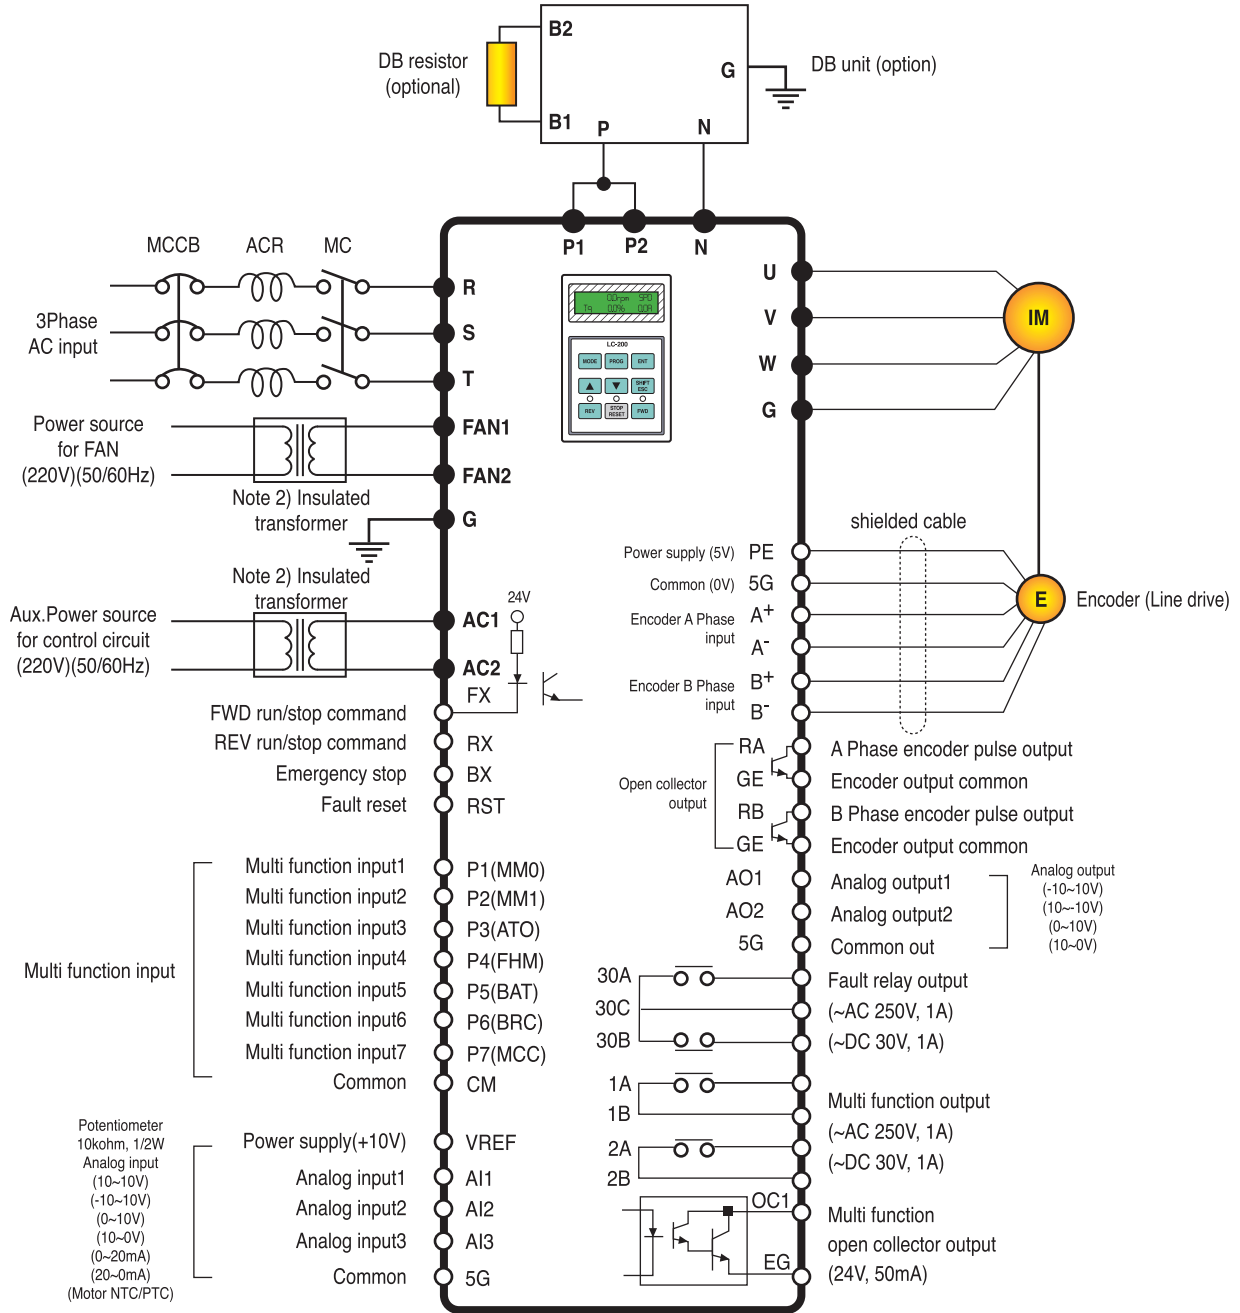

Note) ● : Power terminal ○ : control terminal

Wiring

AC Input Type

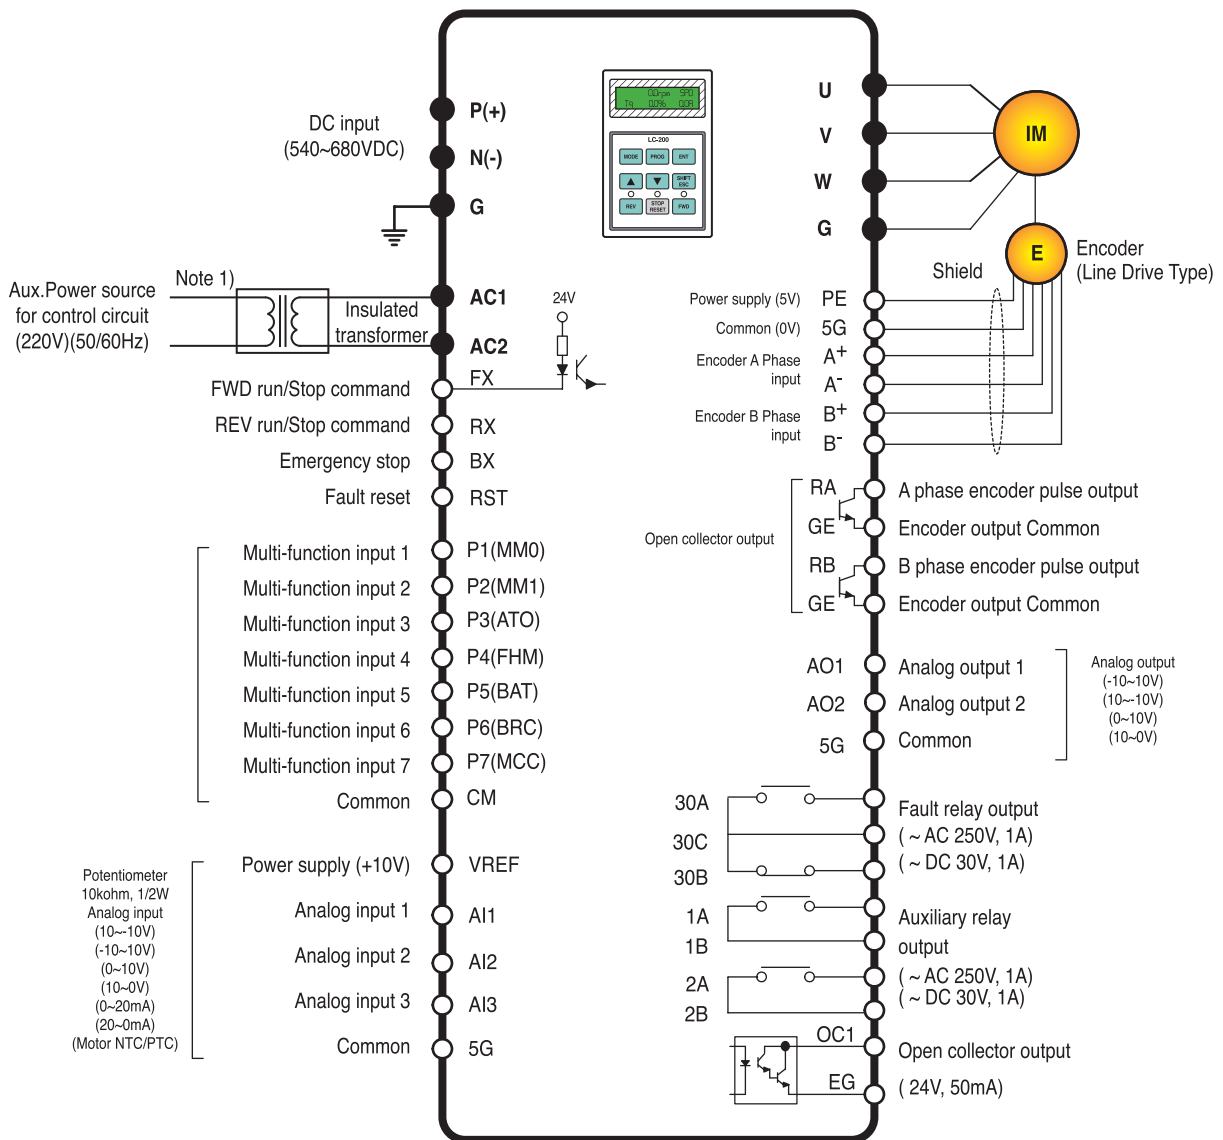

500kW (400V)

Note) ● : Power terminal ○ : control terminal

DC Input Type

5.5~375kW (400V)

Note) ● : Power terminal ○ : control terminal

* SIO terminal indication for SV2800~3750iV5: PE → PENT, GE → G24X

Note 1) It is used when inverter control circuit is energized from auxiliary power source (220 VAC) without main power supply. Use insulated transformer to separate from main power supply. (Transformer capacity: above 100VA recommended)

Wiring

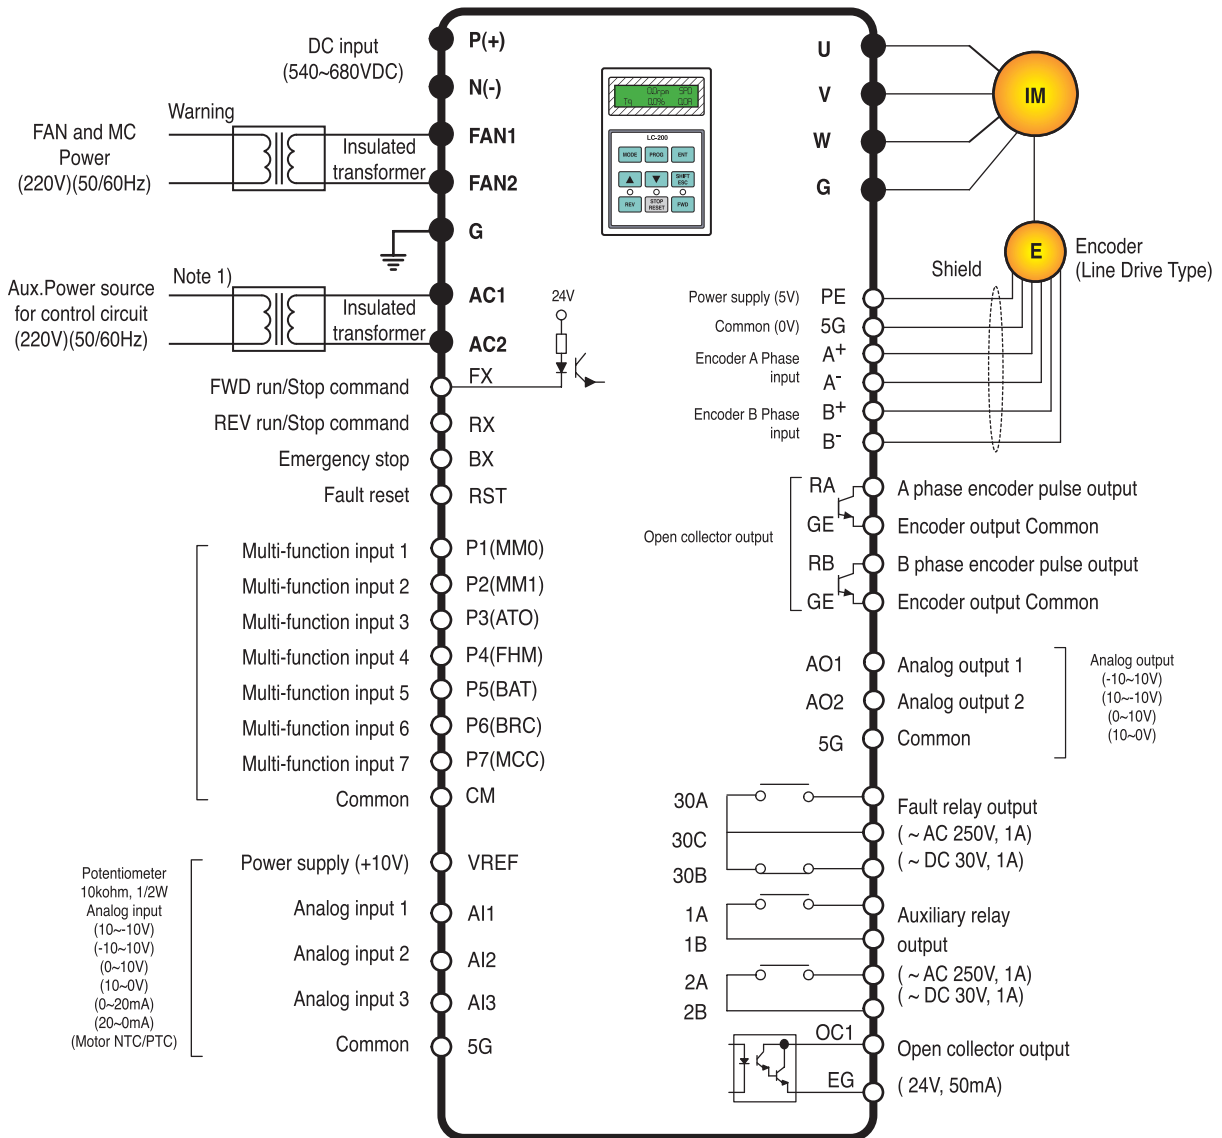

DC Input Type

500kW (400V)

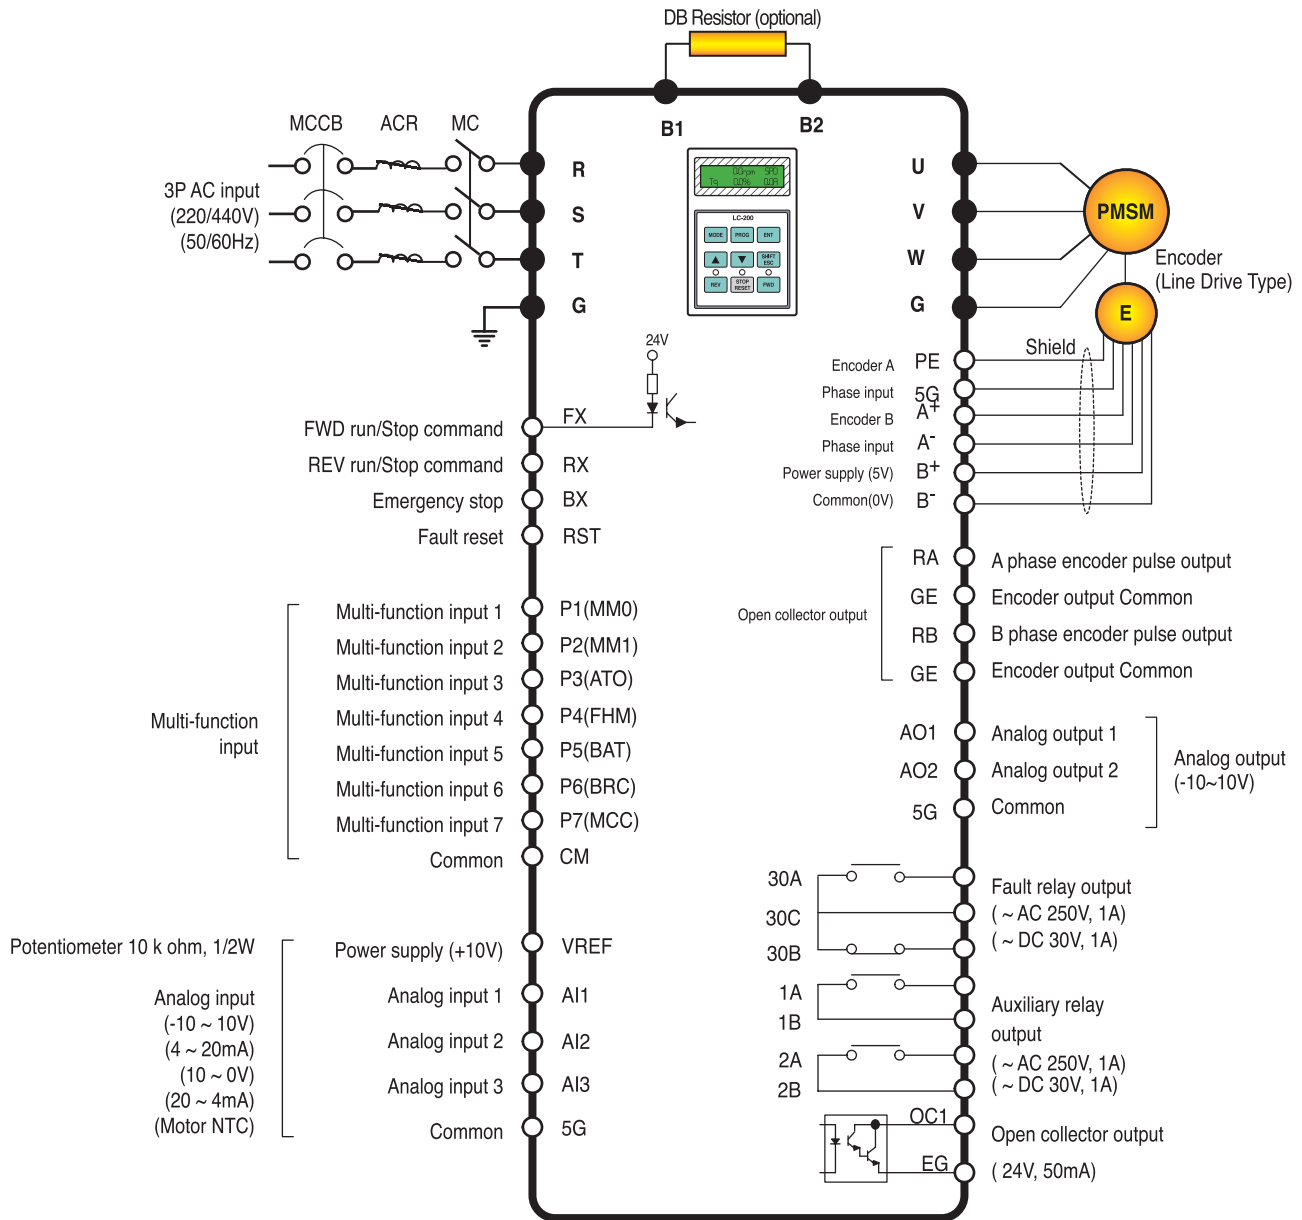

Warning) It must be energized AC220V (50/60Hz) to terminal of FAN1 and FAN2 because 30 ~ 500kW-4DC series have a cooling fan for AC power drive and MC. If not, Trip (30~160kW: "FAN/MC PWR", 220kW: "FAN PWR") will be occurred. The inverter is not operated unless trip is released after AC220V inputs. The recommended order of power input and cutoff is as shown below.
(The order of power On: 220VAC → P(+)/N(-) → Run, The order of power Off: Stop → P(+)/N(-) → 220VAC)

Note) ● : Power terminal ○ : control terminal

Note 1) It is used when inverter control circuit is energized from auxiliary power source (220 VAC) without main power supply. Use insulated transformer to separate from main power supply. (Transformer capacity: above 100VA recommended)

7.5~22kW (MRL)

Note) ● : Power terminal ○ : control terminal

Terminal Function

■ Power Terminal

Display	Name	Description
R, S, T	AC Input	3Phase AC input connection 1) 200V: 200~230V, 50/60Hz 2) 400V: 300~460V, 50/60Hz
U, V, W	output	Cable connection of 3 phase induction motor
G	Earth	Inverter frame earth terminal
B1, B2	Braking resistor	Braking resistor connection
P1, P2	DC reactor and Braking unit	DC reactor, braking unit and DC link common connection terminal
P	DC Link(+) terminal	DC Link common connection terminal
N	DC Link(-) terminal	Braking unit and DC link common terminal

■ Control Circuit Terminals

Item	Display	Name	Description
Digital input	FX RX RST P1(MMO)	Forward run command Reverse run command Fault reset	<ul style="list-style-type: none"> ● "ON" when tied to CM terminal ● Stops when FX and RX are ON/OFF simultaneously ● Clears the fault condition only when the fault state is removed ● Selectable among the following 27 functions: (Multi step speed selection 1/2/3, JOG run, MOP up/down/Save/Clear, Analog hold, Main drive, Second function, Speed Acc/Dec time selection, 3-wire operation, External default signal B contact point, Forward rotation prevention, Process PI disable, Timer input, Soft start cancellation, ASR PI Gain selection, ASR P.PI selection, Flux reference selection, Pre-excitation, Speed/Torque control selection, Torque limit use, Torque bias

■ Control Circuit Terminal

Control Terminal Feature

- Control Terminal Panel Arrangement(Standard Type(SIO) - Non insulated type)

I/O Board

1) Encoder wiring and Jumper setup (+15V Complementary or Open collector)

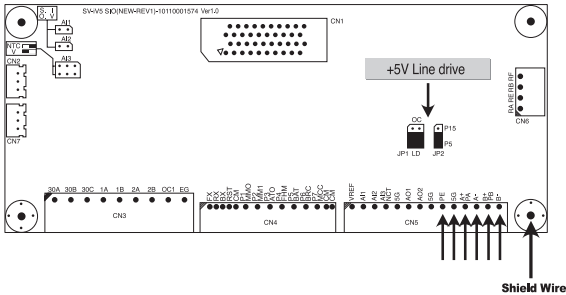

I/O PCB version : V1.0

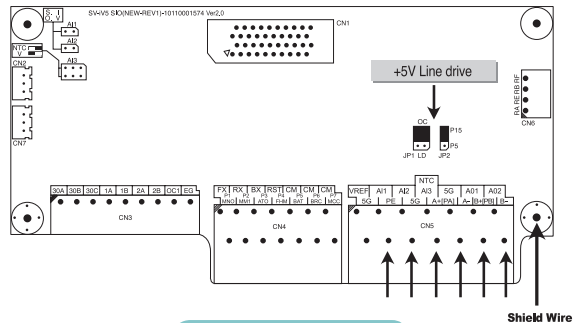

I/O PCB version : V2.0

2) Encoder wiring and Jumper setup (+5V Line drive)

I/O PCB version : V1.0

I/O PCB version : V2.0

3) Analog Input Jumper setup (Voltage/ Current/ Motor NTC inputs)

I/O PCB version : V1.0

I/O PCB version : V2.0

Warning

- Do not change the jumper set for the encoder type during operation. The Jumper type change during operation results in a serious system damage. Jumpers should be set properly before the inverter operation.
- The NTC input of the analog input 3(AI3) is only available with OTIS-LG motors. Use of different type of NTC may cause the motor damage due to overheating.

Loader Use

■ Data and status display

- Shift between function groups
- Shifting from group code to the upper code

- Function code shift
- Shift to next function code
- Data increase in set up mode

- Reverse run command key
- Only available, with loader operation
- LED is turned ON with reverse run
- Blinks during Acc/Deceleration of reverse run

- Shift to function code
- Shift to previous code
- Data is decreased in set up mode

- Data set up start

- Data set up completion

- Decimal point shift
- Only available in case of data setup

- Forward run command key
- Only available with loader operation
- LED is turned on with forward operation
- Blinks during Acc/Deceleration of forward operation

- Stop command
- Available with the loader operation
- LED is turned on when inverter stops its operation
- Blinks when fault occurs
- Reset
- Fault reset

Loader Use Instruction

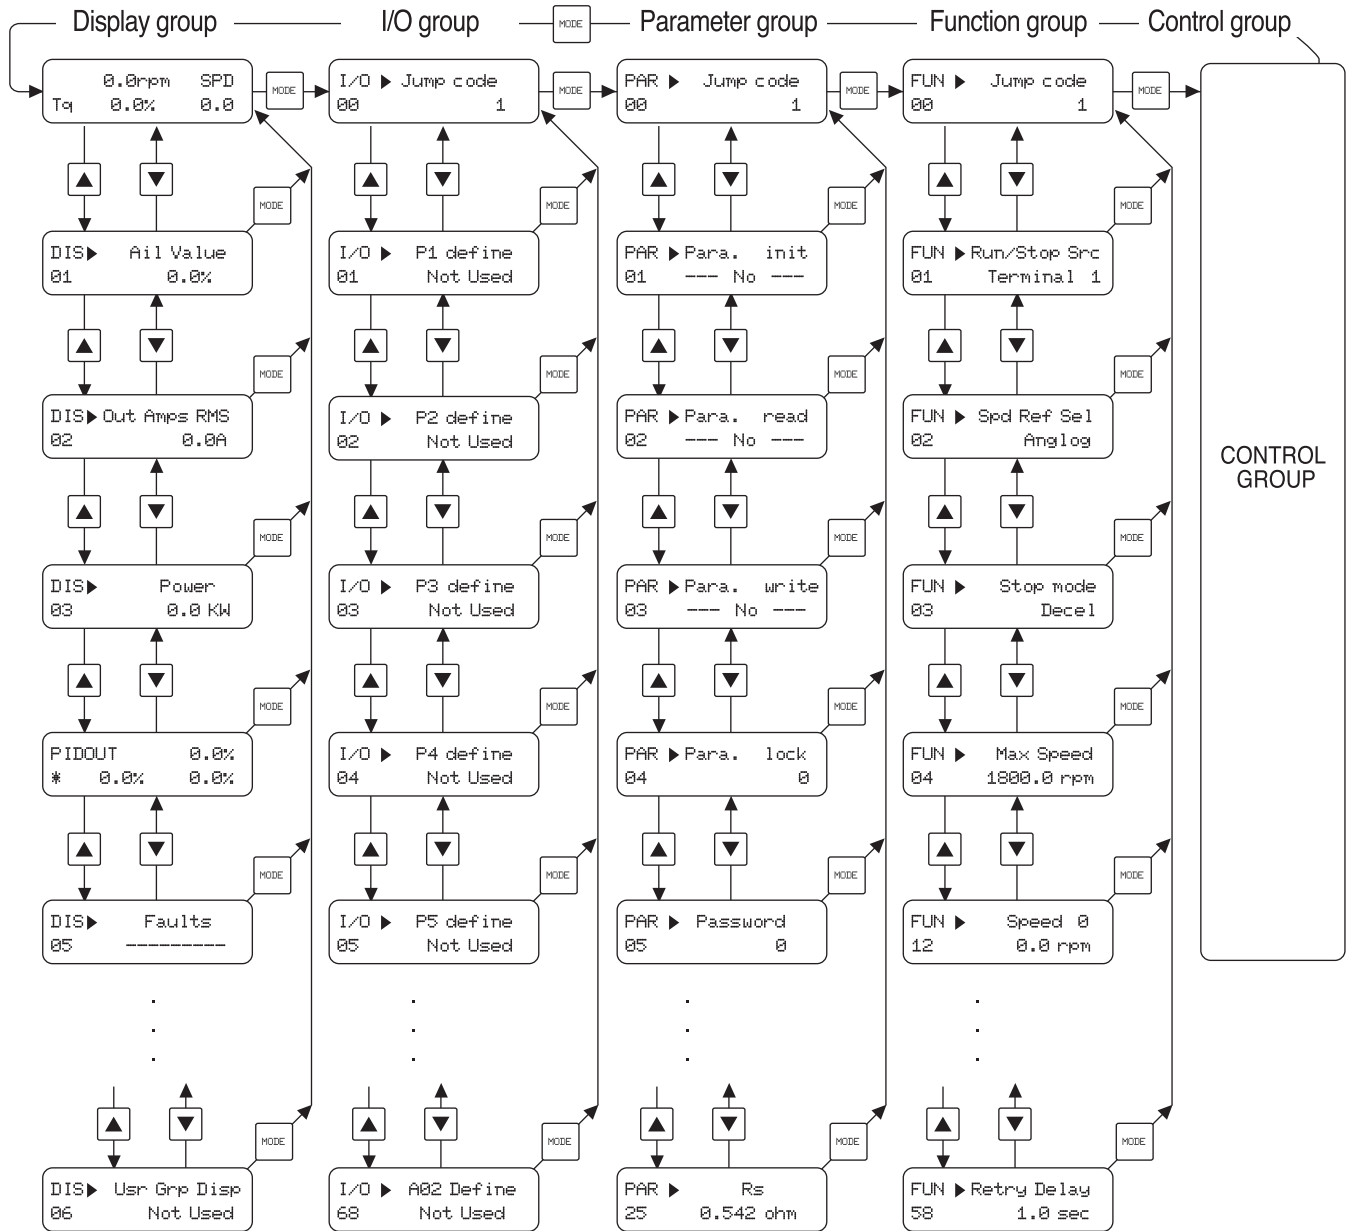

Classification	Display	Function Name	Function
KEY	MODE	Mode Key	shift between groups. shift from a group code to upper code.
	PROG	Program Key	Parameter setting value change.
	ENT	Enter Key	Saving altered setting values.
	▲ (up)	Up Key	Shift between codes and increase the parameter value.
	▼ (down)	Down Key	Shift between codes and decrease the parameter value.
	Shift/ESC	Shift/ESC Key	In case of set up mode, it is operated with the shift key. Operation with ESC key in non-set up mode.
	REV	Reverse run	Reverse run key.
	STOP/RESET	Stop/Reset Key	Stop key when inverter is on operation.
LED	(REV)	Reverse run key	Turns on at reverse operation. Blinks while the inverter is on Acc/Deceleration and then turns on the constant speed operation.
	(STOP/RESET)	Stop/Fault display	Turns off when inverter stops operation. Blinks when fault occurs.
	(FWD)	Forward Run Display	Turns on during forward operation. Acc/Deceleration running modes blink the lamp and it is turned on in the forward operation.

Shifts Between Each Groups and Codes in the Loader

■ Shifts between each groups and codes in LCD loader

The [MODE] key is used for transfer to the other group and the [▲UP] and the [▼down] keys are used to move up and down in the same group.

● The user group and the second group are omitted between shifts of each group.

Function Codes Table

* ‘ - ‘ mark of communication address indicates communication exclusion.

* Setting during Inverter operation (Yes : possible, No : impossible)

FUN_85	7456	Absolute/Relative mode for auxiliary speed	AuxSpeedMode	0(Absolute) 1(Relative)	-	0 (Absolute)	No

*Note 1) It will be displayed when WEB control mode is set.

2) It will be displayed when CON_01 is set to Sensorless.

3) A default value of a time of acceleration and deceleration is different from the setting capacity of inverter.

4) Minimum/Maximum values are different from the capacity of inverter.

5) It will be displayed when FUN_03 (Stop method) is set to 'Free-run'.

6) It will be displayed when the definition of DIO_41 to DIO_43 (Auxiliary output terminal of multi-function) is set to 'Brake Output'.

7) It will be displayed when FUN_71 is set to 'Yes'.

8) It can set for only 5.5 ~ 22 kW/2/4 products in case 'Battery Run' of multi-function input terminal (P1 ~ P&) is turned On.

	2nd_27	The 2nd motor stator resistance	2nd Mot Rs	0.000 ~ 5.000	ohm		Yes
	2nd_32	The 2nd motor electronic thermal 1 minute level	2nd Eth 1min	100 ~ 150	%	150	Yes
	2nd_33	The 2nd motor electronic thermal continuous operation level	2nd Eth cont	50 ~ 150	%	100	Yes

*Note) The auto firing method of the 2nd motor should be Same with the (PAR_22) and (PAR_23).

Braking Unit and Resistor

1. SV055iV5-2/4 ~ SV220iV5-2/4 : Built-in Brake Unit

1) Braking resistor specifications in capacity

Resistance values in the table shown below are calculated based on the 150%, 5%ED standard. In case of 10%ED use, resistor with double rated value should be used. resistors' rated watt.

Type	Applicable Inverters	Capacity(5%ED)	
		[kΩ]	[W]
BR0800W020J	SV 055iV5-2 DB	20	800
BR01200W015J	SV 075iV5-2 DB	15	1200
BR2400W010J	SV 110iV5-2 DB	10	2400
BR2400W008J	SV 150iV5-2 DB	8	2400
BR3600W005J	SV 185iV5-2 DB	5	3600
BR3600W005J	SV 220iV5-2 DB	5	3600
BR1000W085J	SV 055iV5-4 DB	85	800
BR1200W060J	SV 075iV5-4 DB	60	1200
BR2400W040J	SV 110iV5-4 DB	40	2400
BR2400W030J	SV 150iV5-4 DB	30	2400
BR3600W020J	SV 185iV5-4 DB	20	3600
BR3600W020J	SV 220iV5-4 DB	20	3600

▶ ED 100sec standard.

▶ Resistance value is based on the self-cooling standard.

2) Brake resistor wiring

Brake resistor has attached a temperature detectable sensor for fire protection.

See below when in use.

Brake resistor terminal blocks	Inverter terminals	Operation
B1, B2	P, BR	
P7, CM	One of the multi function input terminals, out of P1~P7, of control terminals board is used as defining "External trip signal contact B"	The contact is ON in normal temperature and opens in overheat.

2. SV300iV5-2/4 ~ SV370iV5-2/4, SV450iV5-4 ~ SV3750iV5-4

- ① SV037DBH-2: 37kW/200V Class Braking Unit (10% ED)
- ② SV037DBH-4: 37kW/400V Class Braking Unit (10% ED)
- ③ SV075DBH-4: 75kW/400V Class Braking Unit (10% ED)
- ④ SV075DB-4 : 75kW/400V Class Braking Unit (100% ED)
- ⑤ SV220DB-4 : 220kW/400V Class Braking Unit (100% ED)

- The Combination of two braking unit for 400V class is possible for more than SV900iV5-4 capacity.
- When ED is more than 10%, Use the braking unit for 100% ED (Ex: vertical load such as crane, hoist)
- When the inverter capacity is more than 220kW, use the braking unit for SV2200DB-4 (100% ED).
- Refer to description manual included in braking unit product for the use of 100% ED braking unit.

1) Combination of braking unit

Inverter	Braking unit	SV [] [] [] iV5-2						SV [] [] [] iV5-4					
		300/370	300/370	450/550/750	900/1100/1320/1600	2200	2800/3150/3750						
200V	37kW	1											
	37kW		1										
400V	75kW			1	2								
	220kW					1	2						

Note) 1. Example) Combine two braking units of 75kW ~ 400V Class for SV-900iV5-4(90kW) Class.
2. Refer to the Braking Unit user manual that came with the braking unit.

2) Braking resistor for braking unit

Braking Unit	100% of Braking Torque, 10% ED	
	Resistance [Ω]	Rated Power [kW]
37kW ~ 200kW	3	5
37kW ~ 400kW	12	5
75kW ~ 400kW	6	10
75kW ~ 400kW	6	Refer to extra manual in the case of 100% ED braking unit.
200kW ~ 400kW	2	

● Terminal functions

Terminal name	Description
P/B1	Connection to inverter terminal P2 or P and B2 of braking resistor.
N	Connection to inverter terminal N
B2	Connection to brake resistor B2
G	Ground terminal
IN+	Control connection lint(used when SLAVE MODE)
IN-	Control connection lint(used when SLAVE MODE)
OUT+	Control connection lint(used when MASTER MODE)
OUT-	Control connection lint(used when MASTER MODE)
30A/30B/30C	Fault signal output terminal, when the protection function of braking unit operates. 30A : Contact A, 30B : Contact B, 30C COMMON

Braking Unit and Resistor

● Display functions

Displayed item	Description
POWER	Main power in braking unit turns on the POWER LED. Generally the braking unit is wired to Inverter so, once the input main power of inverter is on the POWER LED of braking unit turns on.
RUN	While braking unit operates its normal operation by the motor regenerative energy, the RUN LED blinks.
OHT	During the braking operation, if the braking unit heat sink is overheated and exceeds its limited value, the overheat protection function operates. This blocks the braking unit signal and then turns on the OHT LED.
OCT	During the braking operation, if over current flows in the main circuit of braking unit inside then the over current protection function is operated in order to prevent the circuit from over current. The TURN ON signal of braking unit is blocked and then turns on the OCT LED.

■ Terminal Block and Braking Unit

Weight: 2.45kg

Main circuit terminal block

Control circuit terminal

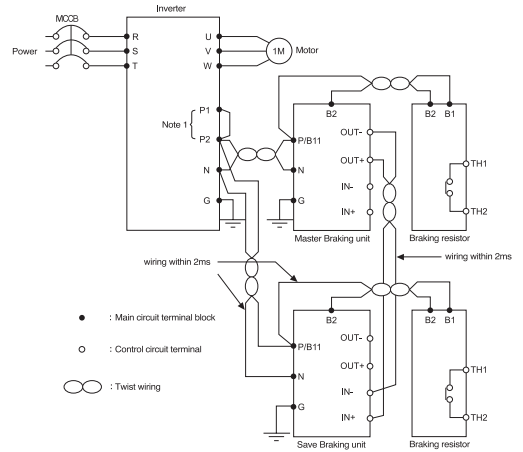

■ Wiring

1) Single use of Braking unit

2) Double use of Braking unit

■ Combination of the Braking units and Braking resistors

● 30~37kW(200V/400V)

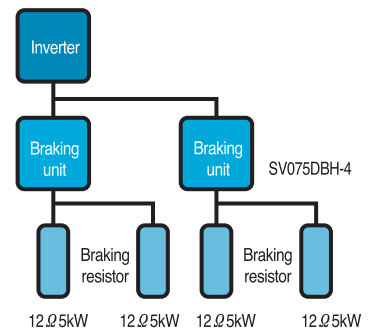

● 45~55kW(200V)

● 45~75kW(400V)

● 90~160kW(400V)

Dimension

1) 2.2 ~ 22kW (200V/400V), Mold Type

● Dimensions of each capacity (mm[inches])

Inverter Model	W1	W2	H1	H2	D1
SV022iV5-2/4DB (MD)			284	269	207

5) 220kW (400V)
220kW (DC Input Type)

● Dimensions of each capacity (mm[inches])

Inverter Model	W1	W2	W3	L1	L2	L3	L4	D1	D2	D3	D4	P1	P2
SV2200iV5-4	540 [21.26]	649 [25.55]	680 [26.77]	922 [36.3]	968.5 [38.13]	998 [39.29]	150 [5.91]	100.2 [3.94]	271 [10.67]	343 [13.5]	403 [15.87]	38 [1.49]	12 [0.47]

6) 280~375kW (400V)
280~375kW (DC Input Type)

● Dimensions of each capacity (mm[inches])

Inverter Model	W1	W2	W3	W4	D1	H1	H2
SV2800iV5-4	772 [30.39]	500 [19.69]	13 [0.51]	500 [19.69]	1140.5 [44.90]	1110 [43.70]	442 [17.40]
SV3150iV5-4	922	580	14	580	1302.5	1271.5	495
SV3750iV5-4	[6.30]	[22.83]	[0.55]	[22.83]	[51.28]	[50.06]	[19.49]

Dimension

7) 500kW (400V) 500kW (DC Input Type)

● Dimensions of each capacity (mm[inches])

DC has a same dimension as AC.

Inverter Model	W1	W3	H1	D1
SV5000iV5-4	1200 [30.39]	1330 [44.90]	1260 [43.70]	550 [17.40]

8) 7.5 ~ 11kW (MRL)

9) 15kW (MRL)

10) 22kW (MRL)

Fault Solution and Check

■ Fault Display

Inverter faults activate its protection functions which enable the alarm operation and each fault status is displayed in the loader. Refer to table shown below for the LCD loader displays.

Protection function	LCD Display	Description
Over current	OC-U OC-V OC-W	Inverter turns off its output when the output current of the inverter flows more than 200% of the inverter rated current.
Ground fault protection	Ground Fault	Inverter turns off its output when a ground fault occurs and the ground fault current is more than the internal setting value of the inverter. Over current trip function may protect the inverter when a ground fault occurs due to a low ground fault resistance.
Over voltage protection	Over Voltage	Inverter turns off its output if the DC voltage of the main circuit increases higher than the rated value (200V series : 400V DC, 400V Series : 800V DC) when the motor decelerates or when regenerative energy flows back to the inverter due to a regenerative load. This fault can also occur due to a surge voltage generated at the power supply system.
Low voltage protection	Low Voltage	Inverter turns off its output if the DC voltage is below the rated level(200V Series: 200VDC, 400V Series : 400Vdc) because insufficient torque or over heating of the motor can occurs when the input voltage of the inverter drops.
Over load trip (Over load protection)	Over Load	Inverter turns off its output if the output current of inverter is over 180% of motor rated current and over load trip time. (only applicable to over 90kW inverters and also V/F control mode)
Fuse open	Fuse Open	Inverter turns off its output by opening the fuse when something is wrong with the main circuit IGBT to protect the wiring from being damaged from short currents
Inverter over heat	InvOver Heat	Inverter turns off its output if the heat sink over heats due to a damaged cooling fan or an alien substance in the cooling fan by detecting the temperature of the heat sink.
Inverter NTC thermister open	InvThem OP	Inverter turns off its output if the NTC Thermister, which measures the temperature of inverter, is open.
Motor over heat	MotOver Heat	Inverter turns off its output if the motor is over-heated to protect the motor. This protective function prevents the motor from over heat.
Motor NTC thermister open	MotThem OP	Inverter turns off its output if the NTC Thermister, which measures the motor temperature, is open.
Electronic thermal	E-Thermal	Internal electronic thermal of the inverter determines the over heating of the motor. If the motor is overloaded the inverter turns off the output. Inverter cannot protect the motor when driving a multi-pole motor or when driving multiple motors, so consider thermal relays or other thermal protective devices for each motor.
External fault	Ext Trip-B	This is used if the user wants to turn off the inverter output due to external fault signal.
IGBT short	Arm short-U Arm short-V Arm Short-W Arm Short-DB	Inverter turns off its output if IGBT Arm or output shorts occur.
Encoder error	Encoder Err	This is displayed if there is a problem of encoder signal.
BX Protection (Instant cut off)	BX	Used for the emergency stop of the inverter. The inverter instantly turns off the output when the BX terminal is turned ON, and returns to regular operation when the BX terminal is turned OFF. Take caution when using this function.
Motor over speed	Over Speed	The motor runs exceeding 120% of its maximum default speed.
Communication error	COM Error CPU Error	This is displayed if there is any types of communication errors between the inverter main and loader.

Basic configuration

Proper peripheral devices must be selected and correct connections made to ensure proper operation. An incorrectly applied or installed inverter can result in system malfunction or reduction in product life as well as component damage. You must read and understand this manual thoroughly before proceeding.

AC source supply

Use the power supply within the permissible range of inverter input power rating.

MCCB or Earth leakage circuit breaker (ELB)

Select circuit breakers with care. A large inrush current may flow in the inverter at power on.

Magnetic contactor

Install it if necessary. Installed, do not use it for the purpose of starting or stopping. Otherwise, it could lead to reduction in product life.

AC reactor

The AC reactor must be used when the power factor is to be improved or the inverter is installed near a large power supply system (1000kVA or more and wiring distance within 10m).

Installation and wiring

To operate the inverter with high performance for a long time, install the inverter in a proper place in the correct direction and with proper clearances. Incorrect terminal wiring could result in the equipment damage.

Ground

DC reactor

It is required for inverters 5.5kW~22kW (200/400V). Not necessary for inverters below 3.7kW.

To motor

Do not connect a power factor capacitor, surge suppressor or radio noise filter to the output side of the inverter.

Ground

Green Innovators of Innovation

Safety Instructions

- For your safety, please read user's manual thoroughly before operating.
- Contact the nearest authorized service facility for examination, repair, or adjustment.
- Please contact a qualified service technician when you need maintenance. Do not disassemble or repair by yourself!
- Any maintenance and inspection shall be performed by the personnel having expertise concerned.
